# Making a freely moving, rotating and resizing picture

1. Open Rotate_pic.ggb
2. Right-click on the protractor image (pic1) and select Delete.
3. Select the Insert Image icon ❄.
4. Click anywhere in the drawing pad.
5. Select your image.
6. Click on the Move icon ⬚.
7. **Click and drag your image** until the blue point **PicCen** is in the center point of rotation that you want.
8. Click and drag the big purple point **PicA** is in the bottom right corner of the picture.
9. Hide everything but PicCen, PicR and **picSizer**.
10. Click File -> SaveAs and rename your file to a filename of your choice.

- You can use this new ggb file as a starter file *or*

- Follow the directions here to add these elements to an existing ggb file – just don't forget to rename your picture to pic10 if you already have an image in your existing ggb file!

With protractor image in orginal position.

and after moving center, rotating and resizing.
